All You Need To Know About
WannaCry Ransomware

WannaCry is a ransomware that affected a wide range of computers across the world, which were running on Microsoft Windows. This ransomware came to surface in May 2017 when it impacted NHS and a few other major organizations.

How Does The
Ransomware Spread?

- Browsing through untrusted websites.

- Connecting to a PC on an already affected network.

- Being careless while downloading file attachments from e-mails.

- Installing pirated windows software or using outdated operating system.

How To Protect Yourself?

Always make sure that you install the latest security updates to keep your device protected.

Disable the Server Message Block (SMBv1) protocol to protect yourself from these attacks.

Be sure to keep your PC's firewall always on & also install an antivirus software.

Create a backup of all your data either on cloud, or any other data storage platform.

Be extra careful while opening any kind of links in your mail.
