

# Points To Consider While Securing MSPs

There are a host of reasons why you should focus on Managed Service Providers'(MSP) security.

Things to consider are:

MSPs need a well-conceived security stack that should encompass a multi-layer security strategy.

Multi-Factor Authentication should be enabled for all authentication attempts made off-premises as well as password reset requests.

It is important to stay informed about new security guidelines and regulations for MSPs to ensure compliance.

Identify and segment customers based on compliance to ensure user data protection.

An external security monitoring service should be deployed to secure your environment 24/7.
