

Tips to Prevent Unauthorized Access to Windows Network

Preventing unauthorized access to a computer network can help limit the chances of a cyber attack or network breach.

These 4 tips can help prevent unauthorized access to Windows network:

01

Find any old devices & accounts existing in the Active Directory & remove them.

02

Add Two Factor Authorization such as Biometric authentication, FIDO2 security keys, etc.

03

Review user logins & analyze all the failed login attempts to check breach attempts.

04

Educate users & employees on password best practices, failed login attempts, & other cyber threats.
